

Recommended nbn modem/routers

Modem/routers recommended for nbn FTTP, HFC, FTTC & Fixed Wireless

Picking the right router doesn't need to be a headache. The right setup helps you get the most out of your internet plan. Whether you're streaming, gaming, or browsing, your hardware matters. Here's what to consider.

Your home layout

Big house? Two storeys? Lots of brick walls? You'll need strong Wi-Fi to reach every corner.

How many devices are online?

If all devices in your home are online at once – like phones, laptops, gaming consoles, and smart TVs – you need a modem/router that can support that demand.

What are you doing online?

Streaming 4K, gaming, video calls, and large file uploads all need fast, stable Wi-Fi. Some routers also let you prioritise devices, so your gaming or work calls stay smooth.

Recommended devices for nbn FTTP, HFC, FTTC & Fixed Wireless

Mid-range	High-end
TP-Link Archer AX53 TP-Link Archer AX73 TP-Link Deco X50	TP Link Archer BE550 TP-Link Archer BE800 TP-Link Archer GE800

If your MATE plan includes a home phone (VoIP), you'll need a device with a VoIP port. We recommend:

- TP-Link Archer VR2100v or TP-Link Archer VX1800v
- D-Link DSL-X1852E or D-Link DSL-X3052E

 **Heads up – we don't provide support for setting up BYO VoIP devices.**

Mesh Wi-Fi routers

For bigger homes, we recommend a Mesh Wi-Fi system. These use a main router and extra modules placed around your home to improve coverage. They run off the same Wi-Fi network name & password. We recommend:

- TP-Link Deco
- Amazon eero
- NETGEAR Orbi

You'll find these at major retailers like Officeworks. Choose the one that suits the size of your home.
